

THIS IS ONE GRAND OPENING YOU CAN OVERLOOK.

The Visitor's Center at Kennecott's Bingham Canyon Copper Mine is now open to the public for the 1991 season. You're invited to come out and look at one of mankind's great industrial achievements. The Bingham Copper Mine is the

largest man-made excavation on earth, and is on the National Register of Historic Sites. It also provides 15% of the United States' total copper needs. Most of life's modern conveniences are powered by electricity which begins in generators wound with copper. And that doesn't count copper tubing and wiring used in our homes and automobiles. As you're standing at the Visitor's Center high on the mine's east wall we hope your

perspective includes the value of copper as well as the immense panorama before you.

YOUR SMALL ENTRANCE FEE IS DONATED TO CHARITY.

The Visitor's Center is open from 8 a.m. to dusk seven days a

week until October. The cost is \$1/motorcycles, \$2/autos and \$20/bus, with all proceeds going to local non-profit organizations. Last year, visitors to this fascinating site contributed nearly \$30,000 to these causes while discovering one of Utah's truly unique attractions.
